

SmartCrank™

Avoid injuries and save time and money!

- Reduces the "free-spin" injuries which happen often when operators try to lower the landing gear.
- Ergonomic design uses the upper body muscles more efficiently to reduce back problems.
40% higher leverage helps avoid strain on back muscles when lifting up heavy trailers.
- Patented two position design provides either higher speed operation or more leverage to lift the trailer.
- More than twice the speed than conventional cranks saves time and money.
- The choice of 4 speeds/leverages (2 positions of the handle and 2 gears of the landing gear).
Provides optimal adaptation to the individual needs.
- Quick and easy change from low to high gear.
- Pays for itself in a short time.
